| ACKNOWLEDGMENTS | 15 |
| CHAPTER | |
| I. INTRODUCTION | 17 |
| II. PHYSIOGRAPHY, GLACIAL DEPOSITS, AND BEDROCK GEOLOGY OF INDIANA | 21 |
| The Physiography of Indiana..... | 21 |
| Glacial-Drift Deposits | 26 |
| Bedrock Geology | 38 |
| III. THE ENGINEERING APPLICATION OF PEDOLOGY..... | 43 |
| Pedology—The Science of Soil Formation..... | 43 |
| Soil-Profile Development | 45 |
| Parent Materials | 51 |
| Topographic Classes | 54 |
| The Soil Pattern | 57 |
| IV. AERIAL PHOTOGRAPHS AND SOIL MAPPING..... | 61 |
| Sand Soils | 65 |
| Glacial Drift Soils | 67 |
| Residual Soils | 69 |
| Gravel Soils | 70 |
| Foreign Soil Conditions | 73 |
| V. ENGINEERING PROPERTIES AND TESTING OF SOILS..... | 81 |
| Classification Tests | 82 |
| Investigational Tests | 88 |
| VI. METHODS OF SAMPLING AND TESTING..... | 94 |
| Sampling | 94 |
| Testing | 96 |
| VII. ENGINEERING SOIL PROBLEMS AND CORRECTIONS..... | 107 |
| Pumping | 108 |
| Pavement Performance and Subgrade Treatment..... | 113 |
| Stabilization | 121 |
| Frost Action | 125 |
| Drainage | 129 |
| Embankments and Compaction Control..... | 132 |
| Landslides | 139 |
| Foundations | 141 |
| Erosion | 142 |

| <i>Chapter</i> | <i>Page</i> |
|--|-------------|
| VIII. SOIL PROFILES—THEIR USE, OCCURRENCE, ENGINEERING CHARACTERISTICS, PROBLEMS, AND CORRECTIONS..... | 146 |
| Use of the Classification Chart..... | 151 |
| Soil Identification | 154 |
| APPENDIX | 305 |
| BIBLIOGRAPHY | 370 |
| PUBLICATIONS OF THE ENGINEERING EXPERIMENT STATION..... | 385 |

List of Charts

| <i>Chart No.</i> | <i>Page</i> |
|--|-------------|
| I. PEDOLOGICAL SOILS AND THEIR RELATIONSHIP TO PARENT MATERIALS AND TOPOGRAPHY | 152 |
| II. LEGEND AND CLASSIFICATION FOR ENGINEERING SOIL IDENTIFICATION..... | 156 |

List of Tables

| <i>Table No.</i> | <i>Page</i> |
|--|-------------|
| I. GLACIAL PERIODS OF THE ICE AGE..... | 27 |
| II. RESULTS OF CLASSIFICATION TESTS..... | 342 |
| III. RESULTS OF PERMEABILITY AND COMPRESSION TESTS ON SATURATED SOIL SAMPLES | 102 |
| IV. RESULTS OF COMPRESSION TESTS ON SEMI-SATURATED SOIL SAMPLES..... | 104 |
| V. LISTS OF GENERAL SOIL AREAS OCCURRING IN INDIANA COUNTIES..... | 306 |
| VI. STATUS OF THE SOIL SURVEY IN INDIANA—1942..... | 331 |
| VII. RECORRELATION OF SOIL NAMES USED IN THE SOIL SURVEYS OF SOME INDIANA COUNTIES | 332 |

List of Figures

| | <i>Page</i> |
|--|-------------|
| The soil profile..... | 16 |
| <i>Fig. No.</i> | |
| 1 Physiographic map of Indiana..... | 23 |
| 2 Major drainage areas of Indiana..... | 25 |
| 3 Boulder belt associated with glacial development in central Indiana | 28 |
| 4 A foreign rock deposited in central Indiana, 16 x 19 feet in size..... | 29 |
| 5 Glacial-drift map of Indiana..... | 30 |
| 6 Distribution of granular materials..... | 35 |
| 7 Exposed profile of a glacial lake-bed soil in the Lake Chicago area..... | 36 |
| 8 Geological map of Indiana..... | 37 |
| 9 Topographic characteristics of the readily-weathered Ordovician formation | 39 |
| 10 Exposure of Silurian limestone on top of Ordovician rock..... | 40 |
| 11 Mississippian sandstone and limestone formations..... | 41 |
| 12 Weathered profile of the Clermont soil exposed in an Indiana high- way cut | 46 |
| 13 A diagram showing the effect of age on the development of soil profiles | 47 |
| 14 Composite section showing the relation of a typical grade line to the topographic features considered in the different types of soil for- mations | 48 |
| 15 The plate-like structure developed in the surface horizons of many midwestern soils | 50 |
| 16 Close-up view of prismatic structure developed in Brookston soils..... | 50 |
| 17 Soils in the 55-to-16-percent-slope-class often appear as valley walls.... | 54 |
| 18 Illustration of 16-to-4-percent-slope-class relief..... | 55 |
| 19 Undulating topography associated with soils that develop in the 4-to-0-percent-slope class | 56 |
| 20 The lake-bed plains of glacial Lake Maumee..... | 58 |
| 21 A view of the flood plains of the Wabash River, showing a typical location of Genesee soil | 58 |
| 22 Portion of a county soil map illustrating the soil pattern..... | 59 |
| 23 Areas of the United States (shaded) in which aerial photographing has been completed by the U. S. Department of Agriculture..... | 62 |
| 24 Matched airphotos illustrating a topographic feature (kame) by stereoscopic inspection | 63 |
| 25 Rugged topography typical of areas of weather-resistant bedrock..... | 64 |
| 26 Rolling topography typical of morainic areas and of 16-to-4-percent- slope class | 64 |
| 27 Typical flat topography | 66 |
| 28 Airphoto showing topographic features of sand deposits..... | 66 |
| 29 Soil pattern commonly developed on relatively impervious silty-clay till in flat terrain | 67 |
| 30 Airphoto of Illinoian drift area..... | 68 |

| <i>Fig. No.</i> | <i>Page</i> |
|--|-------------|
| 31 Airphoto of a limestone, residual-soil area—Corydon, Frederick, and Orleans soils | 69 |
| 32 Airphoto of an elevated glacial terrace..... | 72 |
| 33 A subsurface deposit of granular material mapped as Fox soils..... | 72 |
| 34 An illustration of an esker (granular soil) occurring in otherwise level, glaciated areas | 74 |
| 35 An airphoto of an esker..... | 74 |
| 36 Topography typical of Rodman and Bellefontaine soils..... | 75 |
| 37 A gravel pit located in an esker, mapped as Bellefontaine..... | 75 |
| 38 Map showing distribution of the great soil groups of the world..... | 77 |
| 39 Apparatus and installation for obtaining natural structure samples in the field | 96 |
| 40 Sketch of pressure-saturator chamber..... | 98 |
| 41 Photograph of compression-test chamber..... | 99 |
| 42 Curves showing the effect of recompaction on the stress-strain relationship of a No. 8 horizon of Miami soil..... | 100 |
| 43 Curves showing the effect of moisture content on the stress-strain relationship of Clermont and Hagerstown soils..... | 101 |
| 44 Curves showing range in stress and strain characteristics obtained for various horizons of Miami, Crosby, Brookston, Clermont, Newton, and Warsaw soils tested saturated..... | 106 |
| 45 Ejected soil-water mixture from a concrete pavement joint..... | 107 |
| 46 Pumping and associated problems are usually encountered where heavy traffic is combined with poorly drained subgrade soils..... | 108 |
| 47 Pavement performance that may be expected on heavily traveled highways placed directly on poorly-drained soils..... | 109 |
| 48 Pavement performance on sand, lacustrine, and morainic soils..... | 110 |
| 49 A portion of a soil map showing sand, lacustrine, and morainic deposits | 111 |
| 50 Mud-jack operation used to replace subgrade material lost by pumping | 112 |
| 51 Heavy traffic, weather, and a poor subgrade combined to contribute to the type of pavement performance shown..... | 114 |
| 52 Heavily traveled U. S. No. 41 showing good performance of thin concrete pavement on a granular base after years of service..... | 114 |
| 53 A heavily traveled road on Miami parent material..... | 116 |
| 54 Example of a pavement failure in level topography..... | 116 |
| 55 An example of a four-inch concrete slab in use six years as an airport runway on Warsaw soil..... | 117 |
| 56 An example of a two-inch, bituminous-aggregate mixture on four inches of gravel in use five years as an airport runway on Warsaw soil | 118 |
| 57 Performance in a cut where the pavement was placed directly on clay-shale associated with Jennings soil..... | 119 |
| 58 A heavily traveled, old concrete road placed on Frederick soils of the limestone bedrock area..... | 119 |
| 59 An example of a concrete surface in excellent condition, placed on an insulation course of six inches of sand..... | 120 |

| <i>Fig. No.</i> | <i>Page</i> |
|---|-------------|
| 60 Soil profile and performance record, showing soil-pavement relationship | 121 |
| 61 The modern trend in the use of a high-level profile is shown in new construction paralleling an old highway..... | 122 |
| 62 View showing poor performance of a secondary road placed on poorly drained, plastic Brookston and Clyde soils..... | 123 |
| 63 A secondary road in southern Indiana cutting through Princeton (sand) showing excellent performance..... | 123 |
| 64 View of excellent performance typical of pavements placed on well drained granular soils, such as Bellefontaine, Warsaw, and Fox.... | 124 |
| 65 Excellent performance of a secondary road in a sand cut in northern Indiana | 128 |
| 66 Poor performance of the secondary road shown in Fig. 65, but in a clay-like soil cut | 128 |
| 67 Subsoil permeability of general soil regions..... | 130 |
| 68 A French drain | 131 |
| 69 A fill settlement at a bridge approach..... | 133 |
| 70 Use of granular material in a cut where rock-flour silt (No. 6) was encountered | 135 |
| 71 A fill failure caused by excess water in a rock-soil mixture..... | 137 |
| 72 Faulted area found in connection with a landslide occurring in the Ordovician system in southeastern Indiana..... | 138 |
| 73 General dislocation of pavement caused by landslide shown in Fig. 72 | 138 |
| 74 A landslide associated with Pennsylvanian bedrocks..... | 140 |
| 75 An illustration of the difference in erosion characteristics of the A and B horizons of Crosby soils..... | 143 |
| 76 Locust trees used for erosion control in a Russell soil..... | 143 |
| 77 Effect of uncontrolled erosion in Gibson soils..... | 144 |
| 78 An unprotected cut slope showing the highly erosive nature of the No. 6 material (Clermont) found widely distributed in the Illinoian drift area | 144 |
| 79 An illustration of the erosive quality of the residual soils developed from limestone, showing that very flat cut slopes may also require vegetative cover | 145 |
| 80 The use of sod in eliminating erosion in a shallow, limestone residual soil | 145 |
| 81 An illustration of the differences in appearance between adjacent areas of depression and slightly undulating soils..... | 147 |
| 82 Section of cut made in 4-to-0-percent-slope-class soil showing the grade line located on the highly plastic B horizon..... | 148 |
| 83 Section of cut made in 16-to-4-percent-slope-class soil showing the grade line passing through horizons having a wide variation in soil characteristics | 148 |
| 84 Map of Indiana showing soil parent-material areas..... (In pocket) | |
